With the increasing cost, China construction ceramic industry has been **moving and altering** for the last two years, which the original industry distribution is changing and adjusting sharply. Combined the experience from foreign mature industrial zones with Chinese national situation. The experts of China construction ceramic industry raise the industry distribution mode of "A+X", namely industrial cluster + industrial zone.

Based on the exiting industrial zone, to foster and build multi industrial clusters likes Foshan (A). The industrial clusters exert accumulative effect, drive the perimeter multitudinous rising industrial zones(X). And to build a new industrial pattern in integrate point and sphere ,step-ladder distribution, logical density and harmonious development. With the mode of "A+X", the forming of industrial clusters and industrial zones of China construction ceramic will be clearer. The mode emphasizes a localization plan in logical density, characteristic complementation and cooperation with many aspects, regarding the promotion of the improvement of the environment protection and innovation
